Your Comments: It took many decades to pollute and toxify such a beautiful river system in its pre industrial state. I think the plan should restore to maximal capacity this state. The recreational economic and ecological benefits will more than make up for the cost and time frame. A large number of jobs will be created during this time and no one will look back in 50 years and question the wisdom of this decision. The maximal cleanup is my choice and anything less will still result in a polluted river and its valley as well as contribute to the pollution of our vital oceans
